

## # B-GATE Report — S015

### ## Plain-English Summary

This report evaluates the **adoption readiness** and **governance quality** of a blockchain deployment scenario. The output is a standardized score that helps compare different governance designs and identify risk areas.

### ## Key Result

- **B-GATE Index:** 40.12/100
- **Rating:** RED (High governance/adoption risk)
- **Penalty points:** 10.0
- **Penalty reasons:** Missing incident-response governance

### ## Score Breakdown

- **ARS (Adoption Readiness):** 45.79/100
- **GQS (Governance Quality):** 53.5/100
- **TSS (Trustworthiness & Sustainability):** 50.12/100

### ## Scenario Description (Benchmark Input)

- Domain: nonprofit\_donations
- Governance model: consortium\_bft
- Stakeholders: 8
- Trust asymmetry: 2 / 5
- Data sensitivity: 5 / 5
- Dispute frequency: 4 per month
- Regulatory pressure: 4 / 5
- Adoption stage: idea

### ## Governance Evidence Flags (Binary)

- Incident response present: 0
- Upgrade policy present: 1
- Dispute process present: 1
- Decision rights clarity: 1 (0 unclear, 2 clear)

### ## Notes for Non-Technical Readers

- A high score means the scenario has **clear rules**, **accountability**, and **operational readiness**.
- Penalties occur when essential governance policies are missing (incident response, upgrades, dispute resolution).
