

B-GATE Report — S010

Plain-English Summary

This report evaluates the **adoption readiness** and **governance quality** of a blockchain deployment scenario. The output is a standardized score that helps compare different governance designs and identify risk areas.

Key Result

- **B-GATE Index:** 10.78/100
- **Rating:** RED (High governance/adoption risk)
- **Penalty points:** 30.0
- **Penalty reasons:** Missing incident-response governance; Missing upgrade/patch governance; Unclear decision-making process

Score Breakdown

- **ARS (Adoption Readiness):** 43.44/100
- **GQS (Governance Quality):** 36.1/100
- **TSS (Trustworthiness & Sustainability):** 46.66/100

Scenario Description (Benchmark Input)

- Domain: academic_credentials
- Governance model: permissioned_raft
- Stakeholders: 8
- Trust asymmetry: 5 / 5
- Data sensitivity: 2 / 5
- Dispute frequency: 1 per month
- Regulatory pressure: 4 / 5
- Adoption stage: pilot

Governance Evidence Flags (Binary)

- Incident response present: 0
- Upgrade policy present: 0
- Dispute process present: 1
- Decision rights clarity: 0 (0 unclear, 2 clear)

Notes for Non-Technical Readers

- A high score means the scenario has **clear rules**, **accountability**, and **operational readiness**.
- Penalties occur when essential governance policies are missing (incident response, upgrades, dispute resolution, etc.).
